

VISION

Integrity Engineering Ltd

FIELD EVALUATIONS

Vision Integrity's Field Evaluation program is accredited by the Standards Council of Canada and meets the requirements of the Canadian Electrical Code and CSA SPE-1000 to ensure safety and code compliance on various electrical products.

The Canadian Electrical Code mandates that all electrical equipment that is manufactured or imported into Canada must be evaluated and approved by an Accredited Inspection Body.

ABOUT THE COMPANY

We can provide a multitude of inspection and quality assurance services to support our clients from individual activities to provision and management of a complete program. We work with our clients to understand their requirements to provide cost-effective solutions with high quality results. Our inspectors can capably serve clients throughout Canada and United States.

Quality Management

Proven Quality Management System that is certified compliant to ISO 9001.

OUR APPROACH

- Developed cost controls through optimal utilization of personnel, materials and equipment.
- We work alongside our clients to ensure that our services produce a maximum return on investment.
- We work with our clients to provide a higher quality service and can customize services to our clients needs.

Standards Council of Canada

Inspection Body for Electrical Inspections accredited by the Standards Council of Canada (SCC).

1 Code Compliance

Through careful product evaluation, experienced Field Evaluation Inspectors will ensure that all products are code compliant to the Canadian Electrical Code and Model Code SPE-1000.

2 Safety Hazards

Field Evaluation Inspectors will ensure the equipment meets electrical safety requirements and can identify any potential or existing hazards.

3 Labeling

Field Evaluation Inspectors will apply a regulatory mandated label on all compliant equipment. This will validate that the equipment was evaluated to Model Code SPE-1000.
